Art Unit: 1782

1. The following is an examiner's statement of reasons for allowance: none of the cited art anticipates or renders the sound absorbing material of claim 9 having the claimed porosity, heat resistance and oxygen content, and wherein the silicon carbide fiber contain a metal element which is select from the class consisting of Group II, III and IV metal atoms of the periodic table and in which a temperature at which a free energy change in the carbon reduction reaction of the oxide of the metal element becomes a negative value is higher than a temperature at which a free energy change in the carbon reduction reaction of silicon oxide becomes a negative value, in combination with the other features recited. It is further noted that two "X" references were cited in the search report and IDS filed 5/11/0. These references have been carefully considered but do not teach the claimed sound absorbing material having the claimed porosity, heat resistance and oxygen content and wherein the silicon carbide fiber contain a metal element which is select from the class consisting of Group II, III and IV metal atoms of the periodic table and in which a temperature at which a free energy change in the carbon reduction reaction of the oxide of the metal element becomes a negative value is higher than a temperature at which a free energy change in the carbon reduction reaction of silicon oxide becomes a negative value, in combination with the other features set forth in claim 9 and thus are not X references with regard to claim 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
